# **DIN Rail Power Supplies**

IDEC PS5R-S Slim Line Series

## Switching power supplies from IDEC - Ease of use, convencience and reliability

A reliable power supply is an important part of an automation system. IDEC PSR5-S Series power supplies are designed for industrial applications and for fulfilling all requirements to insure a reliable and stable power supply for PLCs, HMI panels, sensors, actuators and other electronics used in the industry. The design is in all details carefully made to have an easy and optimum mounting in standard electrical panels, both saving time and insuring a good final solution.

### Designed with the user in mind

#### **DC Low Indicator**

#### (15W, 120W & 240W only)

The indicator turns on when the output voltage drops below 80 % of the rated value. This assists in troubleshooting power supply problems.

#### **DC ON Indicator**

The indicator turns on when the unit is powered up. This is a convenient way to know when the power supply is receiving power.

#### **Output Voltage Adjustment**

The output voltage can be easily adjusted within +/-10 % of the rated voltage.

#### Fingersafe, Spring-up Screw Terminals

Don't worry about losing screws or getting an inadvertent shock from a terminal. The terminals are captive spring-up screws, which makes using them as easy as pushing a screw down and tightening it. They are shock- and vibration resistant, and work with ring lugs, fork connectors or stripped wire connections. The terminals are rated IP20 (when tightened) meaning they are recessed to keep fingers and objects from touching the input contacts.

**Top View** 

- 85-264 V AC and 100-350V DC Input
- 5, 12 or 24 V DC Output
- 10 240 Watt
- Only 22.5 mm on a DIN rail (15W)

#### **Universal Inputs**

The power inputs have a range of 85-264V AC to 100-350V DC, and automatically adjust to the correct input power. This makes IDEC power supplies suitable for use anywhere in the world. Power factor correction has also been included to minimize harmonic distortion, resulting in a longer operating life and increased reliability. The power supplies come with spring-up, fingersafe screw terminals.

#### **Output Channel**

With very low output ripples of less than 1 % peak to peak, the power supplies are some of the best in the industry. The output comes with overload protection that prevents damage of the power supply and the spring-up, fingersafe screw terminals add a level of safety and ease for the user. The 240W power supply also has the convenience of two output terminals.

#### Ventilation Grill

Provides cooling for the power supply and prevents small objects from falling into the power supply circuitry.

#### **DIN Rail Mount**

IDEC power supplies can quickly snap onto a DIN rail with built-in DIN rail clips, which require no additional brackets, or directly mountable on a panel which means installation is a snap. The PS5R Standard and Slim Series power supplies are spring-up terminal types that allow easy installation of ring lugs.

#### **Overload Protection**

All IDEC power supplies are designed with overcurrent and overvoltage protection to eliminate power supply or equipment damage. With overcurrent protection, the output voltage automatically drops due to excessive current. When the load returns to a normal level, normal output voltage is restored. With overvoltage protection, the power shuts down when an overvoltage occurs. Only a manual reset can turn the power back on.

#### Long Life Expectancy

IDEC power supplies are very reliable, with a life expectancy of 70,000 hrs (minimum) or longer, depending on usage.

- · Lightweight and compact in size
- Wide power range: 10W-240W
- Universal input: 10W to 90W: 85-264VAC/100-370V DC, 120W and 240W: 85-264VAC/100-350V DC
- Power Factor Correction for 60W to 240W (EN61000-3-2)
- Meets SEMI F47 Sag Immunity (120W & 240W only)
- Approved for Class 1, Div. 2 Hazardous Locations
- Overcurrent protection, auto-reset
- Overvoltage protection, shut down
- Spring-up Screw Terminal type, IP20
- DIN Rail or panel surface mount
- Indicators for: Overload and Low voltage

Wattage	10W	15W		30W		60W	90W	120W	240W

#### Approvals

CE Marked, TÜV, c-UL, UL508, UL1310 (PS5R-SB, -SC, -SD), UL1604, EN 50178:1997, LVD: EN60950:2000, EMC: Directive EN61204-3:2000 (EMI: Class B, EMS: Industrial)

#### SEMI F47 approved

SEMI F47 defines requirements for semiconductor processing and automated test equipment. The equipment must tolerate voltage sags on the AC power line without interrupting operations.

The graph shows how the equipment must tolerate sags to 50 % for 200ms, sags to 70 % for up to 0.5 seconds, and sags to 80 % for up to 1 second.

#### Derating

All IDEC Slim Line power supplies are listed to UL508, which allows operation at 100% capacity inside a panel. This eliminates the need to use oversize power supplies.

The charts above show that the PS5R-S 10W and 15W (at  $60^{\circ}$  C), 30W/60W/90W (at  $55^{\circ}$  C), 120W (at  $40^{\circ}$  C), and 240W (at  $45^{\circ}$  C) meet the ambient temperature required by UL508 and EN60950 standards to operate at an output current of 100 %. NOTE! Insure convection. Do not block the opening of the switching power supply. Keep at least 20 mm clearance around the switching power supply.
