

GRYPHON™ GM/GBT4400 SERIES OBSOLESCENCE NOTICE

With the release of the **Gryphon 4500 Series** of **WIRELESS²** scanners and given the superior performance vs. its predecessor, Datalogic is announcing the **obsolescence** of the **Gryphon GM/GBT4400** product line, effective **July 31, 2019**.

Product Replacement Recommendations

The **Gryphon™ GM/GBT4500 series** is the natural replacement for the Gryphon GM/GBT4400 product line.

The new **Gryphon 4500 Series** of **WIRELESS²** scanners is the Datalogic premium level of 2D hand held readers for general purpose applications. Wireless times two means that on top of the wireless communication, this new product line introduces for the first time in the hand held reader market an innovative and contactless 'wireless charging system', able to remove the #1 failure cause of all cordless scanners in the field: the contacts!

Based on the inductive charging technology which is already widespread and well known in the consumer market, this contactless system requires no maintenance or cleaning procedures, which means no down time and a lower TCO for our customers. Featuring either Bluetooth® wireless technology (GBT model) or the narrow band radio with Datalogic's STAR Cordless System™ (GM model), the Gryphon 4500 series of wireless readers provide maximum flexibility for any end user application.

The Gryphon 4500 omnidirectional imager provides snappy reading performance on all common 1D and 2D codes. High Density (HD) models are available for reading smaller, condensed codes as well as a dedicated version with red illumination optics to support Digital Watermarking. Datalogic's Motionix™ motion-sensing technology enables the scanner to intuitively switch into hand held mode when the device is picked up. When placed back into the stand, it seamlessly returns to stand mode. The adjustable position cradle provides the flexibility to use the scanner in presentation or stand mode while it's charging.

In the dedicated models with Disinfectant-Ready and Anti-Microbial enclosures, the **Gryphon 4500 Series** of **WIRELESS²** scanners is the ideal companion for Healthcare applications such as in laboratories and bedside point-of-care.

For technical support on migration from the GM/GBT4400 to the GM/GBT4500 product family, please contact our technical support representatives.

Important Notes:

- All the current **Gryphon GM/GBT4400 standard models** as well as **all special models** based on Gryphon GM/GBT4400 **will be obsoleted effective July 31, 2019**
- For requests regarding customized versions and porting to the new platform, please contact Datalogic's Technical Support
- The IBM 46XX interface is supported through the appropriate active dedicated cable (90A052316 Cable, Active, RS-485 to RS-232, Coiled, 3.6 m)

IMPORTANT NOTES

- The **Gryphon 4500 Series** of **WIRELESS²** scanners and cradles have a completely new design coupled with a brand-new hardware platform providing superior performance vs. its predecessor. Please note they are NOT mechanically 1 to1 compatible with Gryphon 4400 product series.
- Existing cables and power supplies can be used with the new Gryphon GM/GBT4500 series in most of the cases. For any request regarding cables and power supply compatibility, please contact Datalogic's Technical Support.

PRODUCTS OBSOLETE (CONT.)

We take this occasion to remind you that **Gryphon 4400 cordless models** base stations are shared with the **Gryphon 4100 cordless models** and that Datalogic has recently renewed the **Gryphon 4100** product line with a minor release, where critical electronic components have been replaced to ensure continuity of product availability and increased life span.

The recently announced Gryphon 41X2 family is completely equivalent to the Gryphon 41X0 family both in terms of features and characteristics. Gryphon 41X2 cordless models have new base stations and these base stations (associated both to cordless BLUETOOTH and STAR radio models) are compatible with Gryphon 4400 product series.

Until the Last Purchase Date (July 31, 2019), Gryphon 4400 cordless models can also refer to the new base stations part numbers (see below), which are completely equivalent to the current base stations both in terms of features and characteristics.
