

# Hand-Held Pendant Stations/ Handwheels

More than safety.

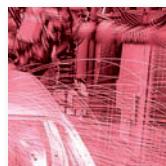

**EUCHNER**

## Safety

# More than safety.

Emil Euchner, the company's founder and inventor of the multiple limit switch, circa 1928.

**Around the world – the Swabian specialists in motion sequence control for mechanical and systems engineering.**

EUCHNER's history began in 1940 with the establishment of an engineering office by Emil Euchner. Since that time, EUCHNER has been involved in the design and development of switch-gear for controlling a wide variety of motion sequences in mechanical and systems engineering. In 1953, Emil Euchner founded EUCHNER + Co., a milestone in the company's history. In 1952, he developed the first multiple limit switch – to this day a symbol of the enterprising spirit of this family-owned company.

### Automation – Safety – ManMachine

Today, our products range from electromechanical and electronic components to complex system solutions. With this wide range of products we can provide the necessary technologies to offer the right solution for special requirements – regardless of whether these relate to reliable and precise positioning or to components and systems for safety engineering in the automation sector.

EUCHNER products are sold through a world-wide sales network of competent partners. With our closeness to the customer and the guarantee of reliable solutions throughout the globe, we enjoy the confidence of customers all over the world.

### Quality, reliability, precision

Quality, reliability and precision are the hallmarks of our corporate philosophy. They represent concepts and values to which we feel totally committed. At EUCHNER, quality means that all our employees take personal responsibility for the company as a whole and, in particular, for their own field of work. This individual commitment to perfection results in products which are ideally tailored to the customers' needs and the requirements of the market. After all: our customers and their needs are the focus of all our efforts. Through efficient and effective use of resources, the promotion of personal initiative and courage in finding unusual solutions to the benefit of our customers, we ensure a high level of customer satisfaction. We familiarize ourselves with their needs, requirements and products and we learn from the experiences of our customers' own customers.

**EUCHNER – More than safety.**

Quality – made by EUCHNER

## About this catalog

The *Hand-held Pendant Stations/ Handwheels* catalog provides you with an overview of our HBA, HBE and HBL series hand-held pendant stations as well as of our series HK and HW handwheels.

Due to their precision, their ergonomic design and their robustness, these switches are the right choice for numerous applications. You will find the technical data after the product overview.

You will find the following series and accessories in this catalog:

Hand-Held Pendant Stations / Handwheels													
Hand-Held Pendant Stations				Handwheels

## **How can I find the right product?**

There are two ways you can find the right product:

- ① If you know the order number or the item designation, look for the product directly in the item index (see page 80 or page 82).
  - ② If you have specific requirements, refine the selection step-by-step with the aid of the table of contents and the selection tables.

# General

EUCHNER

## Standards and approvals

### Standards

Hand-held pendant stations must comply with the requirements of the EMC directive 89/336/EEC. The EMC directive has been implemented in national law in the EU member states and, as a result, is binding for all manufacturers. Detailed requirements on EMC are defined in EN 61000 (Electromagnetic compatibility (EMC)) part 6-2 and 6-4. If the requirements of this standard are met, conformity with the applicable laws and therefore with the EMC directive is assumed. EUCHNER hand-held pendant stations comply with the relevant standards and therefore help you to comply with the requirements during the design of your machinery.

### Approvals

Many of the hand-held pendant stations given in this catalog are listed by Underwriters Laboratories (UL). The approval symbols on the individual pages of the catalog indicate which devices are approved.

This is the UL approval symbol:

Products with this symbol are approved by Underwriters Laboratories (UL, Canada and USA)

# Hand-Held Pendant Stations

## Function and technology used in hand-held pendant stations

The most important machine functions can be monitored, e.g. axis selection and axis movement can be controlled decentrally using hand-held pendant stations. The freedom of movement of the machine operator is increased and the operator can monitor and control processes without being tied to a fixed control panel.

In addition to the control function, hand-held pendant stations can also have a safety function. For this purpose the hand-held pendant stations are equipped with emergency stop buttons and enabling switches.

## Hand-held pendant stations with enabling function

Hand-held pendant stations with enabling function are essentially similar to classic enabling switches.

Enabling switches are manually operated control devices that, together with other control switches, enable commands related to potentially hazardous conditions to be run, as long as the enabling switches are actuated continuously. These switches are used wherever personnel must work directly in the danger area on machines and systems. This is necessary, e. g. during setting up, programming, testing or servicing work. As per annex 1 of the Machinery directive, the protective action of movable safety guards can be disabled in these operating modes. The Machinery directive places the condition that these operating modes must be secured using a lockable device (e. g. key-operated switch) and machine operation is only allowed to be triggered by a second, separate action. To enable the operator in the danger area of a machine to trigger a machine movement, an enabling device should also be actuated. The operator must also be able to stop the machine movement using the enabling device. This task is performed by the enabling switch. Every person who is in the hazardous area must carry an enabling device so that suitable action can be taken in case of danger.

## Two-stage or three-stage enabling switch?

The operator can only start a machine movement if he/she actuates the enabling switch and keeps the switch in the actuated position. The movement is stopped again when the switch is released. This two-stage function (OFF-ON) is provided by all enabling switches. However, experience shows that the operator often clenches the enabling switch in an emergency.

In this case a three-stage enabling switch is better and is specifically requested in many C standards. This switch has three switch positions (OFF-ON-OFF) and, if the operator clenches the switch, it is actuated beyond the enabling position (middle position) and the machine is shut down as a result.

If a 2-stage enabling switch is used, it must also be ensured that, in an emergency, the operator is in a position to activate an emergency stop device in close proximity (VDI 2853). To identify the type of enabling switch in the catalog, the following symbols are used:

Symbol for  
a 2-stage enabling switch

Symbol for  
a 3-stage enabling switch

## Function sequence for two-stage enabling switch

2-stage enabling switch

## Function sequence for three-stage enabling switch

3-stage enabling switch

# Hand-Held Pendant Stations

**EUCHNER**

As can be clearly seen in the figure, the enabling function can only be achieved at stage 2. This function is provided by the closing of the normally open contacts (NO = E1 and E2).

If the button is released, that is back from stage 2 to stage 1, the normally open contacts are opened again. The 2 and 3-stage enabling switches are identical in this function.

If, in this example, the button on a 3-stage enabling switch is pressed past the actuating point (stage 2) in panic (to stage 3), then not only the normally open contacts (NO) are reset, but also the safe positively driven contacts (NC ⊖) are opened.

The patented switch system ensures that the enabling function does not become active at stage 2 on the resetting of the pushbutton from stage 3 to stage 1. In this example the enable can only be given if normally open and positively driven contacts are closed at the same time. This situation is only possible on actuation from stage 1 to stage 2. In the other direction, from stage 3 to stage 1, stage 2 is skipped and unintentional restarting prevented.

Once the pushbutton has reached stage 1, the function sequence can be started again.

Due to its design, the switch unit also provides a wear-free, constant actuating point (stage 2).

## Kits for hand-held pendant stations

To enable you to use ergonomically designed housings even for small quantities, e. g. prototypes or special versions, EUCHNER provides kits for hand-held pendant stations. As a result, you can assemble a hand-held pendant station in a user-friendly housing to suit your requirements.

## Explanation of symbols and notation

Symbols and specific notation related to the switches or the contact element are used time and again in the catalog.

The following example is intended to explain these aspects:

- ▶ Notation 1 NC ⊖ + 1 NO

Explanation:

Normally closed contacts are termed NC, normally open contacts NO. The number indicates how many contacts are available. The symbol ⊖ after the NC defines that the NC contact is a positively driven contact. This switch therefore has one NC contact and one NO contact; the NC contact is a positively driven contact.

## Ergonomic housing

To make the operation of machines even easier and safer for the user, EUCHNER is the first manufacturer of hand-held pendant stations to have designed the housing taking into account ergonomic aspects. This means the HBL, HBE and HBA housings have been developed such that they fit optimally in the hand. Well-known manufacturers of machine tools and controllers all over the world are already using EUCHNER hand-held pendant stations. The wide product range extends from standard housings to custom-built hand-held pendant stations, e.g. with LCD displays, membrane keypads and serial communication ports.

## Custom hand-held pendant stations

Customized hand-held pendant stations based on the standard devices can also be produced in small quantities. In order to use these ergonomically designed housings for the various requirements, EUCHNER offers the option of customized solutions. In the Appendix you will find forms which can be used to describe your requirements. We will be pleased to draw up a quotation based on your requirements.

## Hand-held pendant stations HBA

- Handwheel 100 pulses, wear-free magnetic detent
- 2 enabling switches, 2-stage, 1 NO contact each

### Depending on version:

- Tamper-proof EMERGENCY STOP device according to EN 418, dual-channel
- 2 selector switches, 5 positions each (X, Y, Z, 4, 5 and 0, 1, 10, 100, 1000)
- 3 membrane pushbuttons, 1 NO contact each

### Notes

- For holder HBA for hand-held pendant stations, see Accessories page 56
- For related 23-pin flange socket, see Accessories page 50

Hand-held pendant station HBE - 097 336 with:	
► Handwheel 100 pulses	
► Tamper-proof emergency stop device according to EN 418, dual-channel	
► 2 enabling switches ZSG 2-stage, 1 NO contact each	097 336
► Row of three buttons, illuminated, 1 NO contact each	
► 2 selector switches, 6 positions (X, Y, Z, 4, 5, 6) and 5 positions (0, 1, 10, 100, 1000)	

## Wiring diagram

# Hand-Held Pendant Stations

## Hand-held pendant station HBE - 097 337

- ▶ Handwheel 100 pulses
- ▶ Enabling switch 3-stage
- ▶ 9 illuminated buttons
- ▶ Buttons can be designed as required using slide-in film

Dimension drawing

### Notes

- ▶ For holder HBE for hand-held pendant stations, see Accessories page 56
- ▶ For related 35-pin flange socket, see connection components page 50

### Technical data

Parameters	Value	Unit
<b>Housing HBE</b>		
Material	Plastic	
Color	Blue-gray RAL 7031	
Ambient temperature	0 ... +55	°C
Degree of protection according to EN 60529	IP 65	
Connection	Cable 3.5 m, 35-pin plug	
Weight	Approx. 1.8	kg
<b>Handwheel HKD</b>		
Pulses per revolution	100	
Power supply	5 ± 5%	V DC
Output circuit	RS 422 A	
Output signals	See page 57	
<b>Enabling switch ZSE, 3-stage</b>		
Switching elements	1, 2 NO contacts, 1 positively driven contact	
Utilization category to IEC 947-5-1	AC-15 U <sub>e</sub> 24 V I <sub>e</sub> 4 A DC-13 U <sub>e</sub> 24 V I <sub>e</sub> 3 A

## Hand-Held Pendant Stations

**EUCHNER**

# Kit for Hand-Held Pendant Stations HBA

**EUCHNER**

## Kit for hand-held pendant stations HBA

The kit is designed to match individual customer specifications. Thanks to its modular configuration, you can construct prototypes and special versions in line with your requirements.

Aluminum front plates are available in silver or black anodized to match the housings.

Customer-specific functionality can be achieved by using the components supplied in the kit (pushbuttons, selector switches, key-operated rotary switches, etc).

For connection to the control system, cables with different numbers of cores, plug connectors and the relevant flange sockets are available.

### Kit HBA without handwheel

The designs without handwheel have a cable gland and mounting magnet. In addition to the basic housing HBA, other identical designs with the option of fitting an EMERGENCY STOP and 2-stage or 3-stage enabling switches are available.

### Kit HBA with handwheel

The designs with handwheels, some with 2-stage or 3-stage enabling switches, differ in the output stages on the handwheels and are adapted to various control systems.

# Kit for Hand-Held Pendant Stations HBA

## Housing HBA without handwheel

- ▶ Cable gland for cable diameter 5-10 mm
- ▶ Rubber-coated mounting magnet on the rear of housing
- ▶ 6 fixing points for printed circuit board in top shell

### Depending on version:

- ▶ Hole for EMERGENCY STOP device (sealed with blanking plug)
- ▶ 2 enabling switches, 2-stage, 1 NO contact each
- ▶ 1 enabling switch, 3-stage, 2 NO contacts

### Notes

- ▶ Matching front plate, see page 36
- ▶ Matching EMERGENCY STOP device (rotary or pull release) see page 46
- ▶ **Attention:** housing HBA - 095 562 only suitable for EMERGENCY STOP device with rotary release.
- ▶ Depending on version with two 2-stage enabling switches or one 3-stage enabling switch.

### Dimension drawing

For dimensions of EMERGENCY STOP devices see page 42

# Kit for Hand-Held Pendant Stations HBE

**EUCHNER**

The kit is designed to match individual customer specifications.

The housings differ in the safety elements that can be integrated:

- ▶ Housing without holes and without safety-related components
- ▶ Housing with dual-channel enabling switch on both sides and hole for EMERGENCY STOP
- ▶ Housing with single-channel enabling switch on both sides and hole for EMERGENCY STOP
- ▶ Housing with 3-stage enabling switch (1 positively driven contact, 2 NO contacts) without EMERGENCY STOP
- ▶ Housing with 3-stage enabling switch (2 positively driven contacts, 2 NO contacts) with hole for EMERGENCY STOP

Various versions of front plate are available:

- ▶ Front plate for applications with handwheel
- ▶ Front plate for applications without handwheel

With the related seal, degree of protection IP 65 is achieved.

Customer-specific functionality can be created by using the components supplied as accessories (pushbuttons, selector switches, key-operated rotary switches) and/or other components.

For connection to the control system, cables with or without plug connectors and with different numbers of cores and the relevant flange sockets are also available as accessories.

## EMERGENCY STOP devices according to EN 418

- ▶ With pull release
- ▶ EMERGENCY STOP device for housing HBA without handwheel design 2/3 and all housings HBA with handwheel but not including enabling switch ZXE 3-stage

### Notes

- ▶ The EMERGENCY STOP device engages when actuated by pressing, unlocks when pulled, and is overload-proof
- ▶ Do not use for housing HBA with 3-stage enabling switch ZXE

### Technical data

Parameter	Value	Unit
<b>Actuating element</b>		
Color of actuating button	Red	
Color of bottom shell	Yellow	
Switching elements	2, one positively driven contact each	
Degree of protection	IP 65	
Utilization category to IEC 947-5-1	DC-13 U <sub>e</sub> 24 V I <sub>e</sub> 3 A	

- ▶ With rotary release
- ▶ EMERGENCY STOP device for housing HBA

### Notes

- ▶ The EMERGENCY STOP device engages when actuated by pressing, unlocks when rotated, and is overload-proof

## Electronic Handwheels

**EUCHNER**

# Electronic Handwheels

**EUCHNER**

## Function and technology used in handwheels

The change from a handwheel directly coupled to the spindle or axes to CNC-controlled axes has meant dramatic new developments for the handwheels. Along with the rotary movement and the visual indication of the position, the rotation of the handwheel generates square-wave pulses that are evaluated by the CNC axis controller and initiate the movement of the axis. With over 20 years of handwheel experience, EUCHNER provides a wide selection of handwheels that meet the high requirements on quality, reliability and safe signal generation in the machine tool sector. The daily use of handwheels places high demands on the mechanical design. With twin bearings and a wear-free detent, the handwheels are the optimum choice for trouble-free operation. The detent moment prevents undesired movement even in the event of machine vibration. The detent moment and the 100 or 25 pulses per revolution allow a desired value to be set quickly, reliably and accurately. In addition to the manual positioning of axes on CNC-controlled machines, handwheels are also used for medical and telecommunication applications. EUCHNER also offers handwheels for these applications.

### Magnetic detent mechanism

Handwheels with magnetic detent are characterized by their absolutely wear-free and noiseless detent mechanism.

### With 100 detent positions (100 or 25 pulses)

The detent position is generated by a magnetic field. A combination of 100 magnetic north/south poles is generated by the opposing magnetic fields creating 100 detent positions per revolution of the handwheel. Thanks to an air gap, the detent mechanism has no wear and is absolutely maintenance-free. With two ball bearings, the handwheel's bearing assembly can withstand high axial and radial forces. Different circuit outputs are available for all common controllers.

Three different designs are available:

- ▶ Design HKD
  - Suitable for installation in control panels and EUCHNER HBE and HBL series hand-held pendant stations
  - Suitable for integration in universal turning and milling machines for axis movement

Handwheel HKD

- ▶ Design HKC
  - Suitable for installation in control panels
  - The design is particularly suitable for flat operating panels

Handwheel HKC

- ▶ Design HKA
  - Ergonomically shaped dial
  - The dial design is the same as on the built-in version in the hand-held pendant station HBA
  - Ideally suited for simultaneous use as a handwheel on the operating panel and in the hand-held pendant station

Handwheel HKA

# Electronic Handwheels

**EUCHNER**

## Mechanical detent mechanism

Handwheels with mechanical detent are characterized by their light weight and shallow mounting depth.

### With 100 detent positions (100 or 25 pulses)

A toothed rotor working in conjunction with a roller creates the mechanical detent position. The roller is pushed between the teeth of the rotor by a spring and the dial fixed in position. The detent moment is produced by the movement of the roller over the teeth.

There are two different designs available:

- ▶ Design HWA
  - Suitable for installation in control panels.
  - Suitable for installation in EUCHNER hand-held pendant stations
  - With single-hole bushing mounting

Handwheel HWA

- ▶ Design HWB
  - Suitable for installation in control panels
  - With 3-point fastening

Handwheel HKA

### With 20, 25 or 50 detent positions (pulses)

This lower number of pulses per revolution is sufficient for many applications. Handwheels with a small number of positions can be used on control devices with a display and indication of the position as a value. The user obtains the position information via the value displayed. The position is changed by turning the handwheel. Other uses include menu-based applications. The handwheel can be used, e.g. to scroll forwards/backwards or to change or accept default values. Due to the low number of pulses the handwheels are very small. They are ideal for portable applications or for integration in control panels on electronic equipment, e.g. in instruments or in medical and communications technology.

Three different designs are available:

- ▶ Design HWD
  - Suitable for integration in control panels or stand-alone devices
  - For printed circuit board installation
  - With 50 pulses per revolution
  - Small installation dimensions
  - With metal shaft
- ▶ Design HWE
  - Suitable for integration in control panels or stand-alone devices
  - For printed circuit board installation
  - With 20 pulses per revolution
  - Small installation dimensions
  - Cost optimized due to use of plastic shaft
- ▶ Design HWF
  - Suitable for integration in control panels or stand-alone devices
  - For printed circuit board installation
  - With 25 pulses per revolution
  - Small installation dimensions
  - With pushbutton function as acknowledgement signal

# Electronic Handwheels

## Handwheel HKD

- ▶ 100 detent positions per revolution
- ▶ Wear-free magnetic detent mechanism
- ▶ 100 or 25 pulses per revolution
- ▶ Installation in control panels and EUCHNER HBE and HBL series hand-held pendant stations

### Notes

- ▶ A05 output suitable for Siemens controllers with RS422 input
- ▶ G05 output suitable for Fanuc control systems and Allen-Bradley control systems with push-pull inputs
- ▶ For dial, see Accessories page 73
- ▶ For front plate, see Accessories page 73
