* Passed the UL 991 Environment Test

* UL 61010C-1 compatible, Passed the UL 991 Environment Test based on SEMI S2-0200. [Category applicable for semiconductor manufacturing: TWW2, Process Equipment] [Applicable standards: UL 61010C-1]
[Additional test / evaluation standards as per intended use: UL 991, SEMI S2-0200]

FX-301-F7

FX-301-F7

Easy operation even for beginners! Optimum settings can be realized with simple operations

For use with leak detection or liquid detection fiber only

The FX-301-F7 (Note 1) dedicated for the leak detection fiber FD-F705 and the FX-301-F dedicated for the liquid detection fiber FT-F902 are available. Optimal setting is possible with easy operation.

Note: The FX-301-F can be also used by setting it to leak detection mode. However, the functions are different from the FX-301-F7 dedicated for the leak detection fiber. so it is recommended to use the FX-301-F7 when using the leak detection fiber.

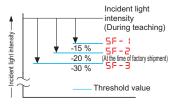

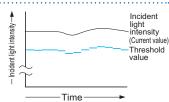

Sets the optimal threshold value

Threshold value will be set automatically to -20 % of the incident light intensity during the teaching to steadily detect the leak. It is also possible to change the threshold value to -15 % or -30 %.

Threshold follow-up function

Entry beam intensity is checked at regular time interval (10 min.), and threshold value is reset automatically.

*Function is set to OFF at the time of factory shipment.

Flashing function incorporated

When the leak detection fiber is connected (F7 mode), if a leak is detected, you will recognize which fiber detects the leak at a single glance because the emitter will start

Long life and stable operational settings due to the newly developed emitting element

The newly developed "four-chemical emitting element" used for FX-301-F7/FX-301-F can suppress the secular change of the light emitting element to minimum, allowing stable detection for long period of time.

Easy maintenance, as main and sub units are identical

Both main and sub units utilize the same amplifier body. This feature allows for easy mounting in the side-by-side configuration.

The main and sub unit functions are distinguished only by the proper use of

3-core main cable and the 1-core sub cable. Moreover, by utilizing the same body for both main and sub units, inventory management and maintenance is simplified.

Easy to operate with individual / collective teaching mode

Individual teaching mode (TEACH)

Optimal threshold value is set automatically on **FX-301-F7** just by setting the MODE indicator to "TEACH" and pressing the jog switch.

The threshold value is set after selecting the liquid detection fiber for **FX-301-F**.

Collective teaching mode (ALL)

Teaching is performed collectively for all the connected amplifiers with an optical communication function when the MODE indicator is set to "ALL". Each amplifier will be set with an optimal threshold value.

At the same time, other setting in the master unit will be copied to the slave unit.

Communication direction

Collective teaching mode is possible for 16 units max.

LEAK DETECTION FIBER (FD-F705)

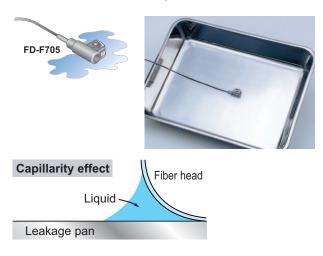

Low profile liquid detection fiber with high chemical resistance

Leak detection fiber cannot be used in combination with the **FX-100/300/311/411** series.

Stable detection performance

The unique effect of capillarity enables reliable detection of small leaks and viscous liquids.

Compact, space-saving

This slim (10 mm 0.394 in) side-mounting fiber head is especially good for use in confined spaces.

Labor-saving design

- Because all you need to install is one screw, one-touch mounting of the fiber head is possible.
- Replacement parts even for resetting after a leak are unnecessary.
- Because the fiber head is simply designed, wiping off leaks is rendered easy.

Superb explosion resistance / chemical resistance

Explosion resistance is enhanced by adopting the fiber method (SEMI S2 compliant). The head unit made of fluorocarbon polymers also has superb chemical resistance.

Amplifier built-in type photoelectric sensor is also line-up EX-F70 / EX-F60

LIQUID DETECTION FIBER (PIPE-MOUNTABLE) (FT-F902)

Stably detect the liquid inside the pipe!

Leak detection fiber cannot be used in combination with the FX-100/300/311/411 series.

Superior explosion resistance compatible to SEMI S2

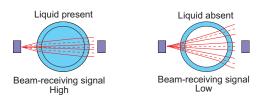

Because there is no electric circuitry in the fiber head, it boasts excellent explosion resistance.

Easy to use and reliable detection

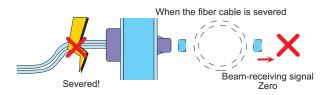

Even when the shape and thickness of the pipe vary, this fiber head uses a method where the beam axis follows the diameter of the pipe, and so when compared to conventional methods, the shape and thickness of the pipe have no influence over the performance of this fiber head.

Stable design that doesn't permit liquid-absent or sensor errors

· When liquid is present, its effect on the lens causes light to focus and enter.

· When abnormalities such as a severed or removed fiber or a cutoff cable occur, light does not enter and the sensor will output the same as "liquid-absent".

Reliable detection not affected by bubbles or droplets

Latest optical fiber techniques have solved problems caused by bubbles, droplets or liquid leakage that arise in conventional pipe-mountable fiber heads.

ORDER GUIDE

Amplifiers Quick-connection cable is not supplied with the amplifier. Please order it separately.

Туре		Appearance	Model No.	Emitting element	Output
Leak	NPN output		FX-301-F7	Red LED	NPN open-collector transistor
detection fiber only	PNP output		FX-301P-F7		PNP open-collector transistor
Liquid	NPN output	M	FX-301-F	D. 1150	NPN open-collector transistor
detection fiber only	PNP output		FX-301P-F	Red LED	PNP open-collector transistor

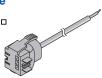

Quick-connection cables | Quick-connection cable is not supplied with the amplifier. Please order it separately.

Туре	Model No.	Description	
Main cable (3-core)	CN-73-C1	Length: 1 m 3.281 ft	0.15 mm ² 3-core cabtyre cable, with
	CN-73-C2	Length: 2 m 6.562 ft	connector on one end

Notes: 1) Highly viscous liquid may not be detected stably.

- 2) Reliable detection may not be possible for unclear or heavily colored liquid.
- 3) Liquid in an opaque pipe cannot be detected correctly.
- 4) FD-F707 has changed the model name. FD-F707 → FD-F7-M7T FT-F905 has changed the model name. FT-F905 → FT-F9-M5T3T

About the handling of the fiber length changed product

The type with fiber length changed is prepared as a semi-custom product with fast response.

Please contact the sales regarding the model name, standard price, and delivery.

- Fiber length extension: Up to 30 m 98.43 ft, in 1 m 3.281 ft intervals.
- Protection tube length extension: Up to 10 m 32.81 ft, in 0.5 m 1.641 ft intervals.

PRECAUTIONS FOR PROPER USE

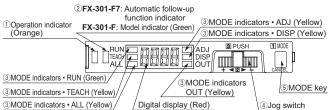

Refer to General precautions.

PNP output type

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Part description

- ① Operation indicator (Orange)... Lights up when output is ON.
- ② FX-301-F7: Automatic follow-up function indicator (Green)... Lights up when automatic follow-up function is ON

FX-301-F: Model indicator (Green)...Lights up during liquid setting (F9 mode). ③ MODE indicators...RUN (Green): Lights up during normal

sensing operation.
TEACH (Yellow): Lights up when the individual teaching mode is selected.

ALL (Yellow): Lights up when the collective teaching mode is selected.

ADJ (Yellow): Lights up when the threshold value fine adjustment mode is selected or the sensitivity switching function is activated.

DISP (Yellow): Lights up when the digital display setting mode is selected or the timer function (FX-301-F only) is activated.

OUT (Yellow): Lights up when the forced output mode is selected or the NO / NC switching function is

activated.

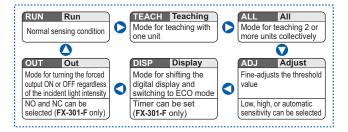

④ Jog switch... Moving this switch in the "+" or "-" direction, allows different items to be viewed for selection and pressing the switch then confirms the selected setting.

⑤ MODE key... This key is used to select operating modes and to cancel settings during the configuration process.

PRECAUTIONS FOR PROPER USE

Refer to General precautions

Setting items

Individual teaching mode

- The sensitivity selection function is set to the automatic sensitivity setting (Auto) at the time of factory shipment. In case sensitivity selection setting is done, make sure to carry out "teaching" after the sensitivity selection setting.
- When MODE indicator / TEACH (yellow) lights up, threshold value can be set on a single unit.

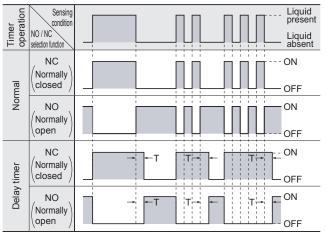

vaic	de can be set on a single unit.	
Step	Description	Display
1	Insert Leak detection fiber (FD-F705) or Liquid detection fiber (FT-F902). Press MODE key to light up MODE indicator / TEACH (yellow).	1234
2	<fx-301-f7> Shift amount of the threshold value can be changed by turning Jog switch to "+" or "-" side. While changing, the digital display (red) blinks. \$\frac{5}{5} - \frac{2}{5} \text{: Shift approx. 15 %} \$\frac{5}{5} - \frac{2}{5} \text{: Shift approx. 20 % (At factory setting)}</fx-301-f7>	\$8 · 2
	5F-3: Shift approx. 30 % <fx-301-f> Turn the jog switch to "+" or "-" side to set to Liquid (F9) mode (·f٩·). (Note 1) In case Liquid (F9) mode(·f9·) is set, the model indicator (Green) lights up.</fx-301-f>	·FQ·
3	Press Jog switch in no-leak condition or no-liquid condition. Press Jog switch to start teaching.	
4	When teaching is accepted, the result of threshold value setting is displayed. • In case stable sensing is possible: "Good" on the display blinks three times. • In case stable sensing is not possible: "Errig" on the display blinks. <fx-301-f7> The shift amount set in the ② will revert to the first shift amount before setting.</fx-301-f7>	3000 [r·]
(5)	If the teaching result is "ງood", the sensor returns to RUN mode automatically and the incident light intensity is shown on the display. MODE indicator / RUN (green) lights up. The setting is complete.	1334

Do not move or bend the fiber cable after the sensitivity setting. Detection may become unstable.

Timer function (FX-301-F only)

- This product incorporates a delay timer which reduces the effect of air bubbles, etc.
- The timer setting can be done by pressing the jog switch for 3 sec., or more, when Liquid (F9) mode (•f3·) has been set and MODE indicator / DISP (yellow) lights up. In case of Leak (F7) mode (•f3·), the display does not change to the timer function.

Time chart

Timer period: T = 10 ms, 100 ms, 1,000 ms

Wiring

- Wiring tasks and expansion tasks must be performed with the power off.
- Verify that the supply voltage variation is within the rating.
- Take care that if a voltage exceeding the rated range is applied, or if an AC power supply is directly connected, the product may get burnt or damaged.
- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of this product, connect the frame ground (F.G.) terminal of the equipment to an actual ground.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- Make sure to use an isolation transformer for the DC power supply. If an autotransformer (single winding transformer) is used, this product or the power supply may get damaged.
- When a surge occurs in the power used, absorb the surge with a surge absorber connected to the power source.
- Take care that short circuit of the load wrong wiring may burn or damage the product.
- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.
- Make sure to use the optional quick-connection cable for the connection of the amplifier. Extension up to total 100 m 328.084 ft is possible with 0.3 mm², or more, cable. However, in order to reduce noise, make the wiring as short as possible.

Others

- Do not use during the initial transient time (0.5 sec. approx.) after the power supply is switched on.
- Take care that the sensor is not directly exposed to fluorescent lamp from a rapid-starter lamp, a high frequency lighting device or sunlight etc., as it may affect the sensing performance.
- Do not use this sensor in places having excessive vapor, dust, etc., or where it may come in contact with corrosive gas.
- When the fiber head gets dusty or dirty etc. the sensitivity deteriorates. To keep stable detection, wipe the fiber head to remove dust or dirt etc. and carry out sensitivity teaching periodically.
- These sensors are only for indoor use.
- Take care that the product does not come in contact with oil, grease, organic solvents, such as thinner, etc., strong acid or alkaline.
- This sensor cannot be used in an environment containing inflammable or explosive gases.
- · Never disassemble or modify the sensor.
- EEPROM is adopted to this product. It is not possible to conduct teaching 100 thousand times or more, because of the EEPROM's lifetime.
