## High-Efficiency Closed Loop Stepping Motor and Driver Package

# AR Series

24/48 VDC Input Types

Standard Type/TH Geared Type/PN Geared Type/Harmonic Geared Type

**Features**

High-Efficiency Stepping Motor and Driver Package  
AR Series can Achieve Continuous Operation.

## Using Oriental Motor's Original Closed Loop Control Technology

The **AR Series** uses our closed loop control to maintain positioning operation even during abrupt load fluctuations and accelerations. The rotor position detection sensor monitors the rotation. When an overload condition is detected, the **AR Series** will instantaneously regain control using the closed loop mode. When an overload condition continues the **AR Series** will output an alarm signal, thereby providing reliability equal to that of a servo motor.

Sensor detects rotor position

### Rotor Position Detection Sensor

The rotor position detection sensor uses the change in inductance caused by change in the distance between the stator teeth and the teeth on the sensor rotor to detect rotor position.

### Features

- This structure can be made small and thin, so the overall size of the motor can be reduced.
- High resolution
- This structure does not use electronic parts, so it is not affected by heat or vibration.

### Angle – Torque Characteristics

- ① If the positioning deviation is less than  $\pm 1.8^\circ$ , the motor runs in open loop mode like a stepping motor.
- ② If the positioning deviation is  $\pm 1.8^\circ$  or more, the motor runs in closed loop mode and the position is corrected by exciting the motor windings to generate maximum torque based on the rotor position.

### Control Diagram

**Normal (Positioning deviation is less than  $\pm 1.8^\circ$ )**

Motor runs in open loop mode like a stepping motor.

**During Overload Condition (Positioning deviation is  $\pm 1.8^\circ$  or more)**

The closed loop mode is engaged to maintain the positioning operation.

## Continuous Operation is Achieved Due to the Reduction of Motor Heat Generation by Utilizing High-Efficiency Technology.

### ■ Lower Heat Generation

The **AR** Series utilizes high-efficiency technology to achieve a significant reduction in the amount of heat generated from the motor.

- Temperature Distribution by Thermography

Comparison under the same conditions

- Motor Case Temperature under Same Operating Conditions

### ■ Energy-Saving

Power consumption: up to **40 %** less than a conventional model (also by Oriental Motor)

- Power Consumption

CO<sub>2</sub> emission: up to **40 %** less \* than a conventional model (also by Oriental Motor)

\* Assuming operation at a duty of 40%

### ■ Continuous Operation or Operation at a high Duty Cycle

The **AR** Series can be operated at high frequency.

You can drive the motor continuously.

#### Note:

- If the motor is operated continuously, a heat sink of a capacity at least equivalent to an aluminum plate with a size of 250 x 250 mm\*, 6 mm thick is required.

\* For AC input type. 100 x 100 mm for DC input type.

## A Stepping Motor Offering Advanced Characteristics That's Also Easier to Use.

### ■ Low Vibration

In addition to the microstep drive system, the **AR** Series also uses the smooth drive function to allow for smoother motion.

The smooth drive function automatically implements microstep drive based on the same travel amount and speed used in the full-step mode, without changing the pulse input settings.

### ■ Improved Angle Accuracy

The **AR** Series uses improved current control technology to improve the stop position accuracy of the motor. The result is greater positioning accuracy.

**AR66AC-3:** ± 3 arc minutes (0.05°)

Conventional Model: ± 5 arc minutes (0.08°)

### ■ High Response

### ■ No Tuning

### ■ No Hunting

### ■ Higher Resolution, Larger Inertial Load

Standard Type

Standard Type with Electromagnetic Brake

Each "package" consists of a motor and a driver.

An electromagnetic brake is available on all types of motors.

- A cable needed for connection between the motor and driver is included.

## Characteristics Comparison for Motors and Geared Motors

Motor Type Geared Type	Features	Permissible Torque Maximum Torque [N·m]	Backlash [arc/min]	Basic Resolution [deg/step]	Output Shaft Speed [r/min]
<b>Standard</b>	<ul style="list-style-type: none"> <li>Basic model of the AR Series</li> </ul>	Maximum Holding Torque 4	—	0.36	4000
<b>TH Geared (Parallel shaft)</b>	<ul style="list-style-type: none"> <li>A wide variety of low gear ratios, high-speed operations</li> <li>Gear ratios: 1:3.6, 1:7.2, 1:10, 1:20, 1:30</li> </ul>	12	45	0.012	500
<b>PN Geared (Planetary)</b>	<ul style="list-style-type: none"> <li>High speed (low gear ratio), high accuracy positioning</li> <li>High permissible/maximum torque</li> <li>A wide variety of gear ratios for selecting the desired step angle (resolution)</li> <li>Centered output shaft</li> <li>Gear ratios: 1:5, 1:7.2, 1:10, 1:25, 1:36, 1:50</li> </ul>	Permissible Torque 37      Maximum Torque 60	3	0.0072	600
<b>Harmonic Geared (Harmonic drive)</b>	<ul style="list-style-type: none"> <li>High accuracy positioning</li> <li>High permissible/maximum torque</li> <li>High gear ratios, high resolution</li> <li>Centered output shaft</li> <li>Gear ratios: 1:50, 1:100</li> </ul>	Permissible Torque 37      Maximum Torque 55	0	0.0036	70

### Note:

- The values shown above must be used as reference. These values vary depending on the frame size and gear ratio.

Each type offers various motor frame sizes in accordance with the motor type, as shown below. [□42: indicates a motor frame size of 42 mm.]

	Power Supply Voltage	Motor Type			
		Standard Type	TH Geared Type	PN Geared Type	Harmonic Geared Type
	24/48VDC	<input type="checkbox"/> 42 <input type="checkbox"/> 60 <input type="checkbox"/> 85		<input type="checkbox"/> 42 <input type="checkbox"/> 60 <input type="checkbox"/> 90	

- An electromagnetic brake is available on all types of motors.

## Features of the AR Series DC Input Type

Easy to use, Compact Driver

Compact DC Input Driver with Plastic Case

Compact DC power input driver is covered by a plastic case. The compact size is great for space-saving.

24/48 VDC

Choose the appropriate power supply 24 VDC or 48 VDC for your application. Motor torque at speed will be increased when 48 VDC is input rather than 24 VDC.

AR66AK-3

## System Configuration

- Standard Type and ● Standard Type with Electromagnetic Brake

An example of a single-axis system configuration with the **SG8030JY** controller.

No.	Product Name	Overview
①	Controller	This controller outputs pulse commands that determine the rotating amount and rotating speed.
②	Control Module	This control module lets you set (edit, monitor, operate) various data and enables extended functions. Communication cable [5 m].
③	Data Setting Software	This data setting software lets you set (edit, monitor, operate) various data and enables extended functions. Comes with a PC interface cable [5 m] and a USB cable [0.5 m].
④	Motor Mounting Brackets	Dedicated mounting bracket for the motor.
⑤	Flexible Couplings	Coupling that connects the motor shaft to the driven shaft.
⑥	Driver Cables General-Purpose Type	General-purpose cable for connecting the driver and controller [1 m, 2 m].
⑦	Connector Terminal Block Conversion Unit	Set of terminal block and cable for connecting the driver and controller [1 m].

### ● Example of System Configuration

Standard Type

AR Series	+	Controller	Motor Mounting Bracket	Flexible Coupling	Connector - Terminal Block Conversion Unit [1 m]
AR66AK-3		SG8030JY-D	PAL2P-5	MCS300610	CC36T1

Standard Type with Electromagnetic Brake

AR Series	+	Controller	Motor Mounting Bracket	Flexible Coupling	Connector - Terminal Block Conversion Unit [1 m]
AR66MK-3		SG8030JY-D	PAL2P-5	MCS300610	CC36T1

● The system configuration shown above is an example. Other combinations are available.

Maximum Holding Torque N·m	4.5	9	1100 × 10 <sup>-7</sup> [1220 × 10 <sup>-7</sup> ] *1	12		
Rotor Inertia J·kg·m <sup>2</sup>						
Backlash arc minute (degrees)	25 (0.417°)	15 (0.25°)			10 (0.167°)	
Permissible Speed Range r/min	0 ~ 500	0 ~ 250	0 ~ 180	0 ~ 90	0 ~ 60	
Gear Ratio	1:3.6	1:7.2	1:10	1:20	1:30	
Resolution Resolution Setting: 1000 P/R	0.1°/Pulse	0.05°/Pulse	0.036°/Pulse	0.018°/Pulse	0.012°/Pulse	
Permissible Torque N·m	4.5	9			12	
Power Source		24VDC ± 10% 2.5A/48VDC±5% 2.5A *4				
Type		Active when the power is off				
Electromagnetic Brake *3	Power Supply Input	24VDC ± 5% *2 0.3A				
	Power Consumption W	6				
	Excitation Current A	0.25				
	Static Friction Torque N·m	2.25	4.5		6	
Mass	Motor kg	3.1 [3.7] *1				
	Driver kg	0.17				
Dimension No.	Motor	[9] [12] *1				
	Driver	[25]				
	Cable	[26]				

\*1 The values inside the brackets [ ] represent the specification for the electromagnetic brake type.

\*2 If the distance between the motor and driver is extended to 20 m or longer, use a power supply of 24 VDC ± 4%.

\*3 The electromagnetic brakes are for holding the position when the power is off. They cannot be used to stop the motor. Also, a separate power supply is required for the electromagnetic brakes.

\*4 When running the motor at 48 VDC, the load inertia should be under 10 times of the rotor inertia and allow for a safety factor of 2 or more times the acceleration torque.

### Note:

- Direction of rotation of the motor and that of the gear output shaft are the same for the gear ratios 1:3.6, 1:7.2 and 1:10. It is opposite for 1:20 and 1:30 gear ratios.

## ■ Connection and Operation

### ● Names and Functions of Driver Parts

### ● Connection Diagram

◇ Connection to Peripheral Equipment

#### • DC Input Type

\*1 Each model comes with a motor cable 3 m long. If you need a cable of a different length, or a flexible cable, select an appropriate cable from among the accessories (sold separately).

\*2 Each model comes with a control I/O connector (CN5), but you must select the driver cable general-purpose type or connector-terminal block conversion unit, both of which are provided as accessories (sold separately).

#### ◇ Connecting a Main Power Supply

Use the following cable for the power supply line;  
AWG24 to 16

#### ◇ Connecting the Electromagnetic Brake

Provide a 24 VDC power supply

\* If the distance between the motor and driver is extended to 20 m or longer, use a power supply of 24 VDC ± 4%.

#### Note:

To protect the switch contacts and prevent noise, always connect the surge suppressor. (The surge suppressor is included with electromagnetic brake motors.)

## Data Setting Software (RoHS)

Extended functions of the **AR** Series are available. You can change the internal parameters or set the push-motion operation using a PC.

### Product Line

Model

**MEXE02**

PC interface cable of 5 m and USB cable of 0.5 m are included.

### Operating Software

Windows® 2000 Professional Service Pack 4 or later  
 Windows® XP Home Edition Service Pack 2 or later \*  
 Windows® XP Professional Service Pack 2 or later \*  
 Windows® Vista Home Basic Service Pack 1 or later \*  
 Windows® Vista Home Premium Service Pack 1 or later \*  
 Windows® Vista Business Service Pack 1 or later \*  
 Windows® Vista Ultimate Service Pack 1 or later \*  
 \* MEXE02 is not available for 64-bit (x64, IA64) Windows XP and Windows Vista.

### Computer

CPU	Pentium® III 800 MHz or more (The OS must be supported.)
Display Resolution	XGA (1024×768) or higher resolution video adapter and monitor
Memory	Windows® 2000 Professional: 448 MB or more Windows® XP Home Edition, Professional: 512 MB or more Windows® Vista Home Basic : 896 MB or more Windows® Vista Home Premium, Business Ultimate: 1.4 GB or more
Free Hard Disk Space	Available disk space of 30 MB or more
USB Port	USB 1 port
Disk Device	CD-ROM drive

# Motor Cables (RoHS)

## Extension Cables (RoHS)

The **AR** Series comes with a 3 m cable for connection between the motor and driver. When it is necessary to have a connection of a different length between motor and driver, a motor cable or extension cable must be used. Use a flexible motor cable if the cable will be flexed repeatedly.

### ■ System Configuration

- Using an Accessory Motor Cable (Not using the 3 m cable included in the **AR** Series)

- Using an Accessory Extension Cable with the included 3 m Motor Cable

\* Electromagnetic brake cable and extension electromagnetic cable are for electromagnetic brake motors. For DC input type, connect the lead wires of the electromagnetic brake cable to the 24 VDC power supply, not to the driver.

**Note:**

- Keep the total cable length below 30 m when connecting a cable included in the **AR** Series and an extension cable.

### ■ Type of Cables

#### ● Motor Cables

Cable Category	Cable Type	Contents
Standard Cable	Motor cable	Motor cable
	Cable set for electromagnetic brake motor	Motor cable Electromagnetic brake cable
Flexible Cable	Flexible motor cable	Flexible motor cable
	Flexible cable set for electromagnetic brake motor	Flexible motor cable Flexible electromagnetic brake cable

#### ● Extension Cables

Cable Category	Cable Type	Contents
Standard Extension Cable	Extension motor cable	Extension motor cable
	Extension cable set for electromagnetic brake motor	Extension motor cable Extension electromagnetic brake cable
Flexible Extension Cable	Flexible extension motor cable	Flexible extension motor cable
	Flexible extension cable set for electromagnetic brake motor	Flexible extension motor cable Flexible extension electromagnetic brake cable

● Flexible Cable: A flexible cable offering excellent flexibility. Use this cable when the cable is bent and flexed repeatedly

● Cable Set for Electromagnetic Brake Motor: Choose the cable set for electromagnetic brake motor consisting of a motor cable and an electromagnetic brake cable for electromagnetic brake motors.

# Driver Cables

## 1 General-Purpose Type

This is a shielded cable equipped with, at one end of the cable, the half-pitch connector that snaps onto the driver.

**Notes:**

- Note that as the length of the pulse signal line between the driver and controller increases, the maximum transmission frequency decreases.
- Install a connector that matches the controller you are using to the other end of the cable.

### Product Line

Model	Applicable Connector	Length L m
CC36D1-1	CN5 (36 pins)	1
CC36D2-1		2

### Dimensions (Unit = mm)

#### CC36D1-1, CC36D2-1

Conductor: AWG28

## 2 Connector – Terminal Block Conversion Unit

CC36T1

A conversion unit that connects a driver to a host controller using a terminal block.

- With a signal name plate for easy, one-glance identification of driver signal names
- DIN-rail mountable
- Cable length: 1 m

### Product Line

Model	Applicable Connector	Length m
CC36T1	CN5 (36 pins)	1

### Dimensions (Unit = mm)

#### CC36T1

- Recommended Crimp Terminals
  - Terminal screw size: M3
  - Tightening torque: 1.2 N·m
  - Applicable minimum lead wire: AWG22
- Note:**
- Round terminals cannot be used.

# Flexible Couplings

## MCS Couplings

### Features of MCS Couplings

This three-piece coupling adopts an aluminum alloy hub and a resin spider. The simple construction ensures that the high torque generated by a geared motor can be transmitted reliably. The proper elasticity of the spider suppresses motor vibration.

### Product Number Code

**MCS 30 08 12**

①      ②      ③      ④

- ① MCS Couplings
- ② Outer Diameter of Coupling
- ③ Inner Diameter d1 (Smaller side) [F04 represents Ø 6.35 mm]
- ④ Inner Diameter d2 (Larger side) [F04 represents Ø 6.35 mm]

- High strength (suitable for geared motors) has been realized.
- A spider (material: polyurethane) controls the vibration generated by the motor.
- No backlash

### Product Line

Model
MCS14 <input type="checkbox"/>
MCS20 <input type="checkbox"/>
MCS30 <input type="checkbox"/>
MCS40 <input type="checkbox"/>
MCS55 <input type="checkbox"/>
MCS65 <input type="checkbox"/>

- Enter the inner diameters of coupling in the box (□) within the model name.

### AR Series AC Input Type

You can order the catalogue separately.

## Motor Mounting Brackets

Mounting brackets are convenient for installation and securing a stepping motor and/or a geared stepping motor.

### Product Line

#### Standard Type

Material: Aluminum alloy

Model	Applicable Product
PAFOP	AR46 □ - ◇
PAL0P	AR46 □ - ◇
PAL2P-5	AR66 □ - ◇ AR69 □ - ◇
PAL4P-5	AR98 □ - ◇ AR911 □ - ◇ *

- Enter **A** (single shaft), **B** (double shaft) or **M** (electromagnetic brake) in the box (□) within the model name. Enter the power supply voltage (**A**, **C**, **S** or **K**) in the box (□) within the model name. Enter the length of included cable **1** (1 m), **2** (2 m) or **3** (3 m) in the box (◇) within the model name.
- The mounting bracket base is built with holes large enough to allow for alignment adjustments in the horizontal direction.
- These mounting brackets can be perfectly fitted to the pilot of the stepping motors. (Except for **PAL0P**)
- \* Enter **A** (single shaft) or **B** (double shaft) in the box (□) within the model name of AR911 □ - ◇ . Enter the power supply voltage (**A**, **C** or **S**) in the box (□) within the model name of AR911 □ - ◇ .

Note:

- They cannot be used with geared stepping motors.

#### Geared Type

Material: Aluminum alloy

Model	Applicable Product
SOL0B	AR46 □ - T - ◇
SOL2A	AR66 □ - T - ◇
SOL5B	AR98 □ - T - ◇

- Enter **A** (single shaft), **B** (double shaft) or **M** (electromagnetic brake) in the box (□) within the model name. Enter the power supply voltage (**A**, **C**, **S** or **K**) in the box (□) within the model name.
- Enter the gear ratio in the box (■) within the model name.
- Enter the length of included cable **1** (1 m), **2** (2 m) or **3** (3 m) in the box (◇) within the model name.
- The mounting bracket base is built with holes large enough to allow for alignment adjustments in the horizontal direction.
- No screws are supplied for installing. Appropriate screws must be purchased separately.

This product is manufactured at a plant certified with the international standards **ISO 9001** (for quality assurance) and **ISO 14001** (for systems of environmental management).

Specifications are subject to change without notice.
