

PLC I/O Unit	CQM1-OD213
Connector Terminal Conversion Unit	XW2D-40G6
Connecting Cable	XW2Z-□□□B
Connections Diagrams	The diagram illustrates the wiring for the CQM1-OD213 PLC I/O unit, showing connections for Word m and Word m+1. The unit features two main terminal blocks, A and B, each with 20 terminals (A1-A20 and B1-B20). The connections are organized into two groups, one for Word m and one for Word m+1. Each group includes a +DC supply line, a common (COM) line, and a series of load (L) terminals. The load terminals are numbered 00 through 15 for Word m and 00 through 15 for Word m+1. The diagram shows that the load terminals are connected to the common line, and the +DC supply is connected to the load terminals. The load range is specified as 4.5 to 26.4 VDC.
