### Legal information

The contents of this document are provided "as is". Except as required by applicable law, no warranties of any kind, either express or implied, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose, are made in relation to the accuracy and reliability or contents of this document. Westermo reserves the right to revise this document or withdraw it at any time without prior notice.

Under no circumstances shall Westermo be responsible for any loss of data or income or any special, incidental, and consequential or indirect damages howsoever caused. More information about Westermo can be found at the following Internet address: http://www.westermo.com

### **Safety**

### Before installation:

Read this manual completely and gather all information on the unit. Make sure that you understand it fully. Check that your application does not exceed the safe operating specifications for this unit.

This unit should only be installed by qualified personnel.

This unit should be built-in to an apparatus cabinet, or similar, where access is restricted to service personnel only.

The power supply wiring must be sufficiently fused (e.g. Littlefuse 0461 1.25), and if necessary it must be possible to disconnect manually from the power supply. If fault contact is used, make sure that fault contact wiring is sufficiently fused.

This unit uses convection cooling. To avoid obstructing the airflow around the unit, follow the spacing recommendations (see Cooling section).

### Before mounting, using or removing this unit:

Prevent access to hazardous voltage by disconnecting the unit from power supply. Warning! Do not open connected unit. Hazardous voltage may occur within this unit when connected to power supply.

### **Care recommendations**

Follow the care recommendations below to maintain full operation of unit and to fulfil the warranty obligations.

This unit must not be operating with removed covers or lids.

Do not attempt to disassemble the unit. There are no user serviceable parts inside.

Do not drop, knock or shake the unit, rough handling above the specification may cause damage to internal circuit boards.

Do not use harsh chemicals, cleaning solvents or strong detergents to clean the unit.

Do not paint the unit. Paint can clog the unit and prevent proper operation.

Do not expose the unit to any kind of liquids (rain, beverages, etc). The unit is not water-proof. Keep the unit within the specified humidity levels.

Do not use or store the unit in dusty, dirty areas, connectors as well as other mechanical part may be damaged.

If the unit is not working properly, contact the place of purchase, nearest Westermo distributor office or Westermo Tech support.

Do not cover or bring mechanical force to the ventilation membrane on the back of the unit.

#### Maintenance

No maintenance is required, as long as the unit is used as intended within the specified conditions.

## Agency approvals and standards compliance

#### FCC Part 15.105 Notice:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- III Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- **III** Consult the dealer or an experienced radio/TV technician for help.

### **Declaration of Conformity**

# **Declaration of conformity**

The manufacturer Westermo Teleindustri AB SE-640 40 Stora Sundby, Sweden

| Type of product | Model        | Art no     |

# **Description**

# **Functional description**

Viper is a range of switches consisting of two different function levels developed for rail and industrial applications. To meet the environmental requirements from rail and harsh industrial applications the switch has rugged M12 Ethernet connectors and full metal housing. The switch fullfill IP 65 degree of protection when all ports are protected/connected else IP 40. Our unique FRNT (Fast Recovery of Network Topology) technology is the fastest protocol on the market to re-configure a network in the event of any failure of a link or hardware. Real-time properties are implemented in the Viper108 and 408 in order to achieve determinism for real time critical applications. The Viper-switches supports QoS (Quality of Service) with four priority queues and strict priority scheduling as well as HoL (Head of Line Blocking Prevention). All to assure that the data network is deterministic.

# Interface specifications

| Power and fault relay port PWR   |  |  |
|----------------------------------|--|--|
| Rated voltage                    | 24 to 110 VDC  |  |
| Operating voltage                | 24 to 110 VDC ±40%   |  |
| Rated current                    | 40 mA @ 110 VDC  |  |
|                                  | 140 mA @ 24 VDC  |  |
| Rated frequency                  | DC   |  |
| Inrush current, I <sup>2</sup> t | Max 0.02 A <sup>2</sup> s @ 24 – 110 VDC   |  |
| Startup current *                | 7 Apeak @ 24 – 110 VDC   |  |
| Polarity                         | Reverse polarity protected   |  |
| Redundant power input            | No   |  |
| Isolation to                     | Connections X1 – X8 and to ground, 1500 VAC.   |  |
|                                  | Fault relay belongs to the same isolation group as the power supply lines (fault relay signals are also contained within PWR). |  |
| Connection                       | 4 pin male M12 connector with A-code   |  |
| Connector size                   | M12, recommended cable area 0.5 mm² recommended (minimum 0.25 mm²), cable dimensions depend on choice of M12 connector         |  |
| Shielded cable                   | Not required, twisted pair is recommended  |  |
| Fault relay resistance           | < 10 Ω   |  |
| Operating voltage                | Up to 110 VDC  |  |
| Max continuous current           | 250 mA   |  |

<sup>\*</sup> If external power supply is used it must meet specified startup current.

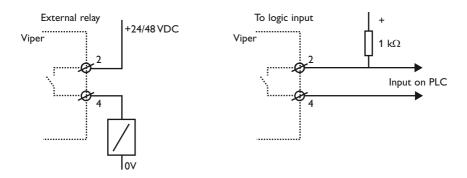

|                                   | Position | Direction | Description                 |
|-----------------------------------|----------|-----------|-----------------------------|
| M12 A-Coded<br>Power<br>Connector | 1        | U+        | Positive supply voltage     |
|                                   | 2        | Out       | Alarm relay (status) +      |
|                                   | 3        | 0 V       | Negative supply voltage     |
|                                   | 4        | Out       | Alarm relay (status) –      |
|                                   | Housing  | Shield    | Chassis of product (ground) |

### **Fault Contact**

The Viper switch is equipped with a potential free normally closed fault contact. The fault contact is a solid state component (relay) that requires power to work and it is transient protected. Additionally, the fault contact is opened when any of the following conditions is met:

- No voltage on the power supply pin, a voltage level outside the legal voltage range or current limitation on the voltage source is applied on the power input.
- Link alarm i.e. missing link on any Ethernet port that has link alarm enabled.
- Redundancy Mode activated i.e. one or more FRNT link is down.

Description of how connection to the fault contact could be done is shown below. The relay is closed when the unit is OK and open at failure. The relay is of semiconductor type (no moving parts). It is specified for max current 250 mA continuous, 500 mA peak (10 ms), operational voltage up to 110 V, protected by a 150 VDC-varistor, ON-resistance less than 10 Ohm, and leakage current max 1  $\mu$ A.

### Service port

The Service Port should not be used by non other than the Westermo Technical Support team. Do not connect any device or cable to the Service Port.

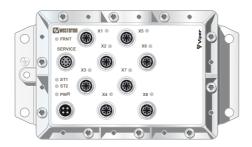

| Ethernet TX port X1 to X8 |   |  |
|---------------------------|---|--|
| Electrical specification  | IEEE std 802.3. 2000 Edition  |  |
| Data rate                 | 10 Mbit/s or 100 Mbit/s, manual or auto                                   |  |
| Duplex                    | Full or half, manual or auto  |  |
| Circuit type              | TNV-1   |  |
| Transmission range        | 150 m   |  |
| Isolation to              | Other Ethernet ports, 500 VAC<br>PVVR, 1500 VAC                           |  |
| Galvanic connection to    | None, except for shielded contact to housing                              |  |
| Connection                | 4-pole M12 female with D-code   |  |
| Shielded cable            | Not required, twisted pair is recommended                                 |  |
| Conductive housing        | Nickel plated zinc, metal housings of X1-X8 also connected to the housing |  |
| Number of ports           | 8 Ethernet (X1-X8)  |  |

| Position | Direction | Description                 |
|----------|-----------|-----------------------------|
| 1        | Out       | Transmit Data +             |
| 2        | In        | Receive Data +              |
| 3        | Out       | Transmit Data –             |
| 4        | In        | Receive Data –              |
| Housing  | Shield    | Chassis of product (ground) |

# Location of Interface ports, LED's

### **LED** indicators

| LED      | Status         | Description  |
|----------|----------------|--|
| PWR      | GREEN          | Unit indicates no fault  |
|          | RED            | Unit indicated fault   |
|          | FLASH          | Connected to IP Configuration tool   |
| FRNT     | OFF            | FRNT is not enabled or not supported                                       |
|          | GREEN          | FRNT is running and the switch is configured as member switch in the ring. |
|          | GREEN<br>FLASH | FRNT is running and the switch is configured as Focal Point                |
|          | RED            | FRNT Error   |
| ST1      | GREEN          | Indicates STP root   |
| ST2      | NC             |  |
| X1 to X8 | OFF            | No Link  |
|          | GREEN          | Link is up   |
|          | GREEN<br>FLASH | Data is transmitted  |
|          | YELLOW<br>ON   | Port larm and no link. If RSTP/FRNT mode are activated, port is blocked.   |

### Configuration

The units can easily be configured via the onboard Web based configuration tool. Local IP addresses can also be configured by using the Westermo IP Configuration tool, from the IP Configuration tool it is then possible to browse into the unit for further configuration.

#### **IP Address**

When delivered, the default IP address of the Viper is 192.168.2.200.

Default gateway 192.168.2.200

If the default address of the unit is valid in the connected network it is possible to access the unit directly from a web browser.

### Change local IP address

The local address of Viper can be configured using the IP Configuration tool, then it is possible to browse into the unit for further configuration. The IP Configuration program is available on the CD or for download from the WESTERMO web page:

http://www.westermo.com, choose Downloads/Software/Ethernet/Ethernet switches Name: IP config Westermo.zip

Install the software and start the application from a PC on the network connected to the same network as the Viper. Make sure that the Default IP of the configuration software (see figure below) is in the same subnet as your PC.

**Note!** If you are not sure about the subnet – consult your network administrator. **Note!** IP Config version must be 10.0.0 or higher.

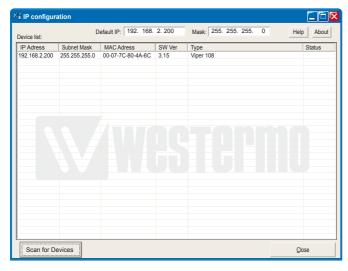

Figure 1

By clicking the "Scan for Devices" button the IP Configuration tool will detect the switches/routers in the network. The software will list all Westermo managed switches or routers connected to the network. Information as in the figure 1 will appear for each detected unit connected to the same network as your PC.

If you only want to change the IP address and the subnet mask, this can be done within the IP config tool.

By clicking the listed Viper that you wish be re-configured you will be asked if you would like to access via web figure 2. Click the abort button, enter the preferred IP address, Subnet mask and IP gateway address and click the Set button to confirm the settings in the unit (see figure 3).

Figure 2

**Note!** If you are not sure about the settings – consult your network administrator.

| Selected Device     |          |      |      |      |    | X |
|---------------------|----------|------|------|------|----|---|
| Viper configuration |          |      |      |      |    |   |
| IP adress:          | 192      | 168  | 2    | 200  |    |   |
| Subnet mask:        | 255      | 255  | 255  | 0    |    |   |
| MAC adress:         | 00       | 07 7 | C 80 | 4A   | 6C |   |
| Host name:          | West     | ermo |      |      |    |   |
| Location:           | location |      |      |      |    |   |
| IP gateway adress:  | 192      | 168  | 2    | 200  |    |   |
| IP gateway adress:  |          |      |      |      |    |   |
|                     |          |      |      |      |    |   |
| <u>S</u> et         |          |      |      | Clos | е  |   |

Click the Close button to get back to main view. You will then be asked if you would like to quit. Click the OK button, figure 4, and you will be back to the main view of the IP Configuration program(see figure 1).

Figure 3

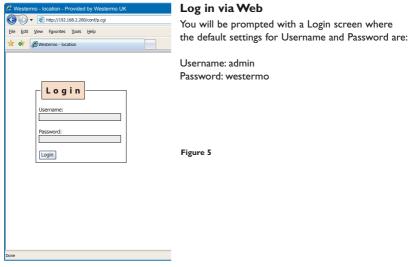

Figure 4

Click the Scan for switches button again and the settings you configured will appear in the list. Now you can access the Viper via the browser for further configuration by clicking the unit with an IP address that fits your subnet. Figure 2 will appear and when you click the OK button and a web browser will be opened and redirected to the Viper unit log in page (see figure 5).

The unit can be easily configured via the on-board Web based configuration tool. The network interface and switch properties can be configured and stored. The Web tool also has an extended integrated help function describing all configuration options.

Note! Max 10 characters can be used in the login.

Note! For login the following characters are not valid.

ASCII 34 = "

ASCII 35 = #

ASCII 39 = "

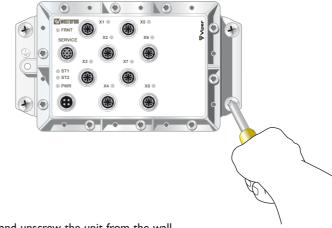

ASCII 40 = (

ASCII 92 = \

6641-2201 15

# **Mounting**

There are four 6 mm bore holes intended for mounting the unit. The unit can be mounted vertical or horizontal. The unit is wall mounted.

# Removal

Disconnect all cables and unscrew the unit from the wall.

### Cooling

This unit uses convection cooling. Avoid obstructing the airflow around the unit. Spacing is recommended for the use of unit in full operating temperature range and service life.
